Height: 40 feet

Spread: 20 feet

Sunlight: ○

Hardiness Zone: 9

Description:

A striking palm that eventually can become quite large; huge, fan like leaves of silvery blue-green emerge from solitary trunks; highly tolerant of intense inland heat, but also does well in coastal areas; an outstanding landscape accent

Planting & Growing

Bismarck Palm (tree form) will grow to be about 40 feet tall at maturity, with a spread of 20 feet. It has a high canopy of foliage that sits well above the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a slow rate, and under ideal conditions can be expected to live for 80 years or more.

This tropical plant should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is not originally from North America.
