

## Silver Saw Palmetto

*Serenoa repens var. sericea*

Height: 8 feet

Spread: 10 feet

Sunlight:

Hardiness Zone: 7

Other Names: *S. repens* Cinerea, *Sabal serrulatum*, Fan Palm

### Description:

This attractive native palm tolerates drought and adapts to a wide variety of soils; a less common silver variety that is a stunning garden or landscape accent; also great in containers or seaside gardens

### Planting & Growing

Silver Saw Palmetto will grow to be about 8 feet tall at maturity, with a spread of 10 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This tropical plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. This plant does not require much in the way of fertilizing once established. It is not particular as to soil pH, but grows best in sandy soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This species is native to parts of North America.

Silver Saw Palmetto makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
